## Data Mining

## Exercise 1 hierarchical algorithms

The following table shows the dissimilarities between 5 objects.

	a	b	$^{\mathrm{c}}$	$^{\mathrm{d}}$	$\mathbf{e}$
a	0				
b	1	0			
$^{\rm c}$	9	2	0		
$^{\mathrm{d}}$	6	5	0 3 14	0	
e	8	6	14	1	0

- 1. Apply a single-link algorithm. Show the resulting dendrogram.
- 2. Same question with a complete-link algorithm. Find a cut-off.

## Exercise 2 k-means

Let  $I = \{1, 2, 18, 20, 31\}$  be a set of elements in a 1-D space. We are looking for a partition of I in 3 clusters.

- 1. Apply k-means with the centroids  $1,\,2$  and 18. What is the final partition ?
- 2. Apply k-means with the centroids 18, 20 and 31.
- 3. Compare the two partitions. How can we measure their quality?
